
FUN AND SUPPORTIVE CRAWLING AID

The Pilot is an innovative and unique crawling aid for children aged 1-5 years of age.

The Pilot assists the child up from the floor which helps to stimulate participation and play.

The patented aid has a gas spring underneath which gives the child a dynamic assistance to lift their pelvis, assuring weightbearing through the hip joints and down to the knees.

The amount of assistance given by the gas spring can be individually adjusted to meet the needs of the child.

The Pilot is fitted with the 2 multi directional roller balls in front that swing 360° giving freedom to explore. 2 fixed directional rear wheels help keep kids on track.

In addition, the height and length of the Pilot can be altered, making the Krabat Pilot suitable for children between the ages of 1-5 years.

The Co-Pilot system, which consists of two knee pads and two elastic bands, was developed to protect the child's knees and give adequate friction on wooden and linoleum floors. The elastic band limits hip abduction and guides into a crawling position.

Optional accessories: Co-pilot system, back strap, butterfly harness

Key user dimensions

	Size 1
Inner width	30 cm
Board width	25 cm
Board length	21 - 28 cm
Total width frame	39 cm
Board height	15-21 cm
Total length	31cm
Weight of unit	1.9 kg
Maximum user weight	25kg
Age	From 9 mo - 5 yrs
