
HYDROTHERAPY AID FOR INDEPENDENCE AND PLAY

Krabat Pirat is a unique and innovative hydrotherapy floating aid that gives the child new opportunities for participation, training and play in water.

The child is safely secured on a padded board with a pair of trousers and an optional back strap. The child is placed in a safe and engaging position on their stomach which allows the child to be active.

The angle of the board can be adjusted from 0 degrees, where the child is laying horizontally, to 90 degrees where the child is in a standing position.

The Pirat can help the child to strengthen their neck and back muscles, improve upper and lower limb mobility and increase stability of the trunk.

The Krabat Pirat was developed with the idea of giving children the feeling of independence, joy, progression, and mastering.

The highly stable floating aid is suitable for children at all levels of functioning and comes in two sizes. Size 1 is suitable for children aged 2-8 years, and size 2 for children aged 8-18 years.

Using the Pirat gives caregivers greater freedom to interact with the child, helping them with eye contact and encouraging play, instead of focusing on their safety.

The product is crafted from solid materials that will not rust. As a result, it can be used in swimming pools, freshwater, or salt water.

Optional accessories: head support, covers, back strap, bag
